Cleaning
Rugs

The
Vacuette
non electric VACUUM CLEANERS

In the U. S. Capitol at Washington, the rugs and carpets are kept fresh and clean with 12 Vacuettes.

Twenty-five Vacuettes are used daily for cleaning the offices of the Carbide & Carbon Building, New York City.

At the great Hotel del Monte, Del Monte, Cal., Vacuettes speed up and simplify the work of the chambermaids.

THE UNION CENTRAL LIFE INS. CO., Cincinnati, Ohio, M. W. McIntyre.

"After making a thorough investigation, we found that the Vacuette was the best machine of its kind on the market. We ordered a number of them from The Scott & Fetzer Company and have been using them continuously in the building for some time. No repairs have been necessary for these machines since we purchased them. Since purchasing the Vacuette sweepers we have discontinued using the stationary vacuum cleaning outfit which is installed in our engine room."

U. S. SENATE, John J. McGrain, Storekeeper.

"On November 27, 1922, I purchased for the United States Senate, six Vacuette suction cleaners, and on December 20, 1922, I purchased six more. They have given very satisfactory service."

HOTEL CLEVELAND, Cleveland, Ohio, E. M. Buel, Manager.

"We have been using Vacuette cleaners for a long time and are seriously considering installing more of them. They certainly do the work to our satisfaction, and we must say they fill a long-felt want. Of course, there are a great many times when it is inconvenient to attach the electric driven sweeper and these work anywhere and at any time. They do the work, too."

THE HEUBLEIN HOTEL, Hartford, Conn., C. D. Perkins, Proprietor.

"We have been using eight of your Vacuettes at this hotel for a number of months, and the service rendered by them has been perfectly satisfactory."

"There seems to be nothing to get out of order and the elimination of dust is very noticeable as compared to other cleaners. We are much pleased with the service and easy manner in which they operate. I might say that our hotel is completely furnished with Oriental rugs and they have never looked as well as they do at this time."

HOUSTON BUILDING COMPANY, Houston, Texas, J. W. Stiles, Superintendent.

"We have 15 Vacuettes in use in the S. F. Carter Building and it gives us great pleasure to say that after twelve months' use of these sweepers, we are very much pleased with the service rendered and the results obtained."

"I have noticed quite a reduction in the amount of dust now as against what was noticeable previous to the adoption of the Vacuette. Previous to that time we operated an installed Vacuum Cleaning System. Now we find it unnecessary to use the installed system at all, the maid of each floor being equipped with a Vacuette which she uses every night. One of the most satisfactory features of this machine is its convenience—no electrical connections being necessary and no dragging cord to get in the way or doing damage. We have found that the maintenance cost probably will not exceed the depreciation of vacuum hose and tools alone."

CHICAGO, MILWAUKEE & ST. PAUL RY. CO., Chicago, Ill., H. S. Sackett, Asst. Pur. Agent.

"Our Dining Car Department has been using your Vacuettes for the past six months and in talking today with our Superintendent of Dining and Sleeping Cars, he advises me that these suction sweepers are the most satisfactory of any that he has ever used and that he is today making requisition for sufficient sweepers to take care of the Dining and Sleeping Cars on this railroad system."

THE FENWICK CLUB, Cincinnati, Ohio, Greg O'Leary, Asst. Gen. Secy.

"Our opinion of the Vacuette can readily be judged from the fact that we have discarded all electric appliances heretofore used and replaced them with Vacuettes. This decision was reached after your machine was given a thorough trial in service that was convincing—that is, hotel service."

In the largest office building in St. Louis, Mo., the Railway Exchange Building, 42 Vacuettes are used for the nightly cleaning of all rugs and carpets.

In the tallest building in Ohio, the Union Central Life Insurance Building, all of the offices are cleaned nightly with Vacuettes.

For two years, 20 Vacuettes have been used every night in the Phenian Building, San Francisco.

Nearly 500,000 In Use In Homes, Hotels, Office Buildings, Etc.

THE Vacuette combines the convenience and ease of operation of the old-fashioned carpet sweeper with the thoroughness of the heavier, cumbersome electric vacuum cleaner.

Strong suction, plus a revolving bristle brush, makes the Vacuette thoroughly efficient—the equal in efficiency of any vacuum cleaner made. This efficiency, plus the ultra-convenience and ease of operation of the ordinary carpet sweeper, makes the Vacuette superior to all other cleaners.

As there is no cost for operation—nor a delicate motor to pamper and care for—and no places to oil, it can readily be seen that the Vacuette is not only the most economical and trouble-proof cleaner made, but it is likewise more durable and time-saving.

The fan-driving mechanism of the Vacuette is in a sealed case and is guaranteed for five (5) years. As the fan-driving mechanism of all vacuum cleaners is essentially the part that performs the heavy work, it can be

most thoroughly appreciated what a five (5) year guarantee on the Vacuette fan-driving mechanism means. Other cleaners are guaranteed for but one year.

The Vacuette looks very much like an electric cleaner but, because it is automatic, (not an electric), it is free from entangling cords, bothersome plugs and switches and all of the troubles and inconveniences of an electric cleaner.

The suction-creating mechanism of the Vacuette automatically draws its motive power from the slight force required to glide the Vacuette over the floor. As the Vacuette glides along, the small wheels on which it runs communicate power to the smooth-running gear, the suction fan and sweeping brush. This is the strongest, simplest, most durable mechanism known to the mechanical world. It has the fewest number of parts and requires no adjustment or attention. All moving parts are packed in grease, reducing friction to almost nothing, and eliminating the necessity of oiling, and it is quiet.

Thus, you see, the Vacuette acts like an electric cleaner, although it is automatic and operates in the same manner as does the old style, dependable carpet sweeper. In short, it eliminates the undesirable features of both the electric vacuum sweeper and the carpet sweeper, and combines their advantages.

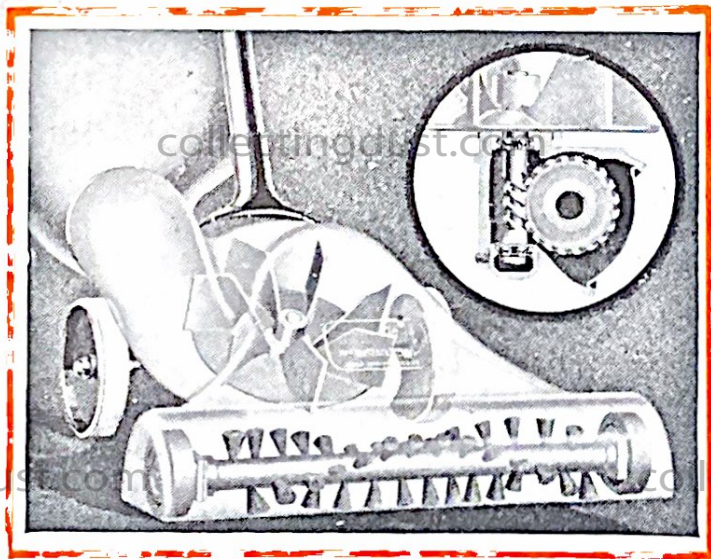

"Seeing is believing"—so take advantage of our free trial offer and test the Vacuette in your own home. Try it on your own rugs where you can judge the results honestly and at your leisure. Make sure by this actual test, that the Vacuette will do all that is claimed for it—that it is the most convenient, economical and all-around desirable cleaner made.

It will cost you nothing to test the Vacuette, so phone the Vacuette Company in your city and ask them to deliver the cleaner to your home. The Vacuette Company is listed in your phone book, so phone us and we will see that a Vacuette is placed in your hands for the free trial. There is absolutely no obligation.

The Vacuette is sold on easy terms.

The X-Ray photograph gives the relative location of the fan, brush, wheels, etc. The small round insert shows the sturdy worm-gear mechanism which drives the fan.

These views cannot fail to emphasize the simplicity of the working parts of the Vacuette. The elimination of unnecessary parts guarantees *Constant Service*. It means durability as well as absolute freedom from all mechanical troubles.

Manufactured by

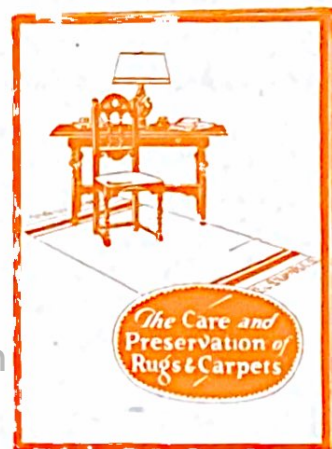

THE SCOTT & FETZER COMPANY

Cleveland - - - - - Ohio

*Largest Manufacturer of Automatic Vacuum Cleaners
in the World.*

The Vacuette is the only vacuum cleaner made with a five (5) year guarantee on the fan-driving mechanism.

Send for Free Book on "Care and Preservation of Rugs and Carpets." Tells how to make floor coverings last longer and look better. How to remove stains, etc. You will find it invaluable.
