**Kirby®**

**MIRACLE WAXER**

#### GET ACQUAINTED . . . .

with the various parts of the Kirby Miracle Waxer by referring to the illustration on page 26 of your Kirby Warranty and Instruction Book.

#### ASSEMBLE THE HANDLE . . . .

by inserting the tapered end of each of two sections to its mating section, and making a firm twist. A light tap on the floor with the assembled handle will keep the handle assembled while in use. If permanent assembly is desired, give the threaded end of the assembled handle a sharp tap against a carpeted floor.

#### ASSEMBLE THE MIRACLE WAXER . . . .

by screwing the threaded end of the assembled handle into the Miracle Waxer Body until firmly seated. *Do not overtighten.*

Remove the Wax Roller from its storage cylinder and snap it into place in the retaining yoke of the Miracle Waxer Body by first inserting the large fixed end of Wax Roller into the large yoke end then snapping the small push button end of the Wax Roller into the push button side of the retaining yoke.

Check to see that the cross feed plug and end plugs are firmly in place.

#### TO LOAD . . . .

the Miracle Waxer remove the cover from the tank and pour in Miracle Waxer Wax up to the desired notch in the step gauge inside the tank. Each notch represents approximately 60 square feet of coverage. Always replace the tank cover after filling the tank with wax. *Do not fill tank above the top notch.*

#### TO USE . . . .

the assembled and loaded Miracle Waxer set the roller on the floor to be waxed, and open the valve by rotating the handle counter clockwise about one turn, which will permit the wax in the tank to flow into the supply tube.

When the supply tube is filled as indicated by wax in the transparent end caps, close the valve by turning the handle clockwise, as shown by the arrows on the handle grip.

Roll the wax on the surface of the floor as you would use a paint roller. Spread out the wax as thin as possible. The thinnest coating provides the quickest drying time and the brightest shine when polished.

When the initial fill in the supply tube is exhausted, replenish the supply tube by opening the valve (turn handle counter clockwise) to release another quantity of Miracle Waxer Wax from the tank. When the supply tube is again filled, close the valve by turning the handle clockwise.

#### AFTER USING . . . .

collectingdust.com

the Miracle Waxer, pour any wax remaining in the tank back into the (Miracle Waxer Wax) container before disassembly.

Remove the wax roller from the body by depressing the button on the end marked "push." If the Miracle Waxer is used frequently, the roller may be stored in its storage tube with the wax still in it. If the Miracle Waxer is not used frequently, the roller should be rinsed out in warm water, squeezed out and placed in the storage tube. The roller need not be dried before putting it in the storage tube.

Unscrew the handle from the Miracle Waxer and wipe wax from valve tip. Remove the tank cover, end plugs and cross feed plug from the Miracle Waxer body. Rinse all parts thoroughly in warm water, dry and put away.

Avoid storing the Miracle Waxer in a hot, dry place.

#### MIRACLE WAXER WAX. . . .

is a specially formulated slip resistant creme wax. One hundred percent of the natural wax is number one Carnauba. Its rate of flow is carefully controlled to match the Miracle Waxer itself and give just the right application to the floor. *No other type of wax should be used in your Kirby Miracle Waxer.*

collectingdust.com

Miracle Waxer Wax can be used on all types of hard surfaced floors, and furniture, or to polish a clean car. It is rebufferable and gives a high gloss when polished with the Kirby Miracle Head.

collectingdust.com

The wax dries with a dull appearance (*within 10 to 20 minutes*) depending on the thickness of the coating. **IT IS IMPORTANT THAT THE WAX BE THOROUGHLY DRY BEFORE POLISHING.** Unlike waxes with hazardous volatiles, additional drying time of the Miracle Waxer Wax does not affect the final results - you can polish it hours after application.
